

GENERAL TARIFF

PRIVATE BRANCH EXCHANGE SERVICE

1.
 - 1.1 P.B.X service affords a combination of exchange service and intercommunicating service. Connections between P.B.X. telephones, and between telephones and trunk lines, are made by manually-operated or dial-operated switching equipment of the P.B.X. system.
 - 1.2 The Company provides standard types of P.B.X. systems and rates are based on the provision of such standard equipment. When the Company incurs unusual expense to meet special requirements of an applicant or customer, it may make an additional charge based on the additional expense incurred.
 - 1.3 The customer is to operate his P.B.X. in accordance with the Company's practices.

2. INITIAL SERVICE PERIOD

- 2.01 For manual multiple systems and cord or cordless dial systems, the initial service period is five years at the same location for the initial installation of switchboard positions and attendant's cabinets, dial switching equipment including selectors (other than incoming selectors, connectors and selector-connectors, and other common dial equipment that causes high installation expense, excluding dial-station line terminals, trunk lines and telephones).

3. RATES AND CHARGES

| USOC | DESCRIPTION | MRC | SC |

5. TRUNK LINES

5.01 Rates for trunk lines are in Section 100-5

6. TIE TRUNKS

6.01 Tie trunks are channels between P.B.X. switchboards. Tie trunks may be provided between equipment of different customers.

6.02 Tie trunks are provided for communications as follows:

(a) Between terminating equipment directly connected to and on the same premises as the associated switchboard.

(b) Between such terminating equipment of on system, through a trunk line of the other system, with any other primary service in the same or another exchange (two-point only). Standard operation and transmission may not be obtained if they are used otherwise.

6.03 Signaling over manual tie trunks are provided as follows:

(a) Ring down. Signaling is by a ringing key at the switchboard. This arrangement is standard and is provided without additional charge.

(b) Automatic. Signaling is done automatically when the attendant established the connection with the other switchboard.

6.04 Tie trunks having terminals in different buildings are subject to local and inter-exchange distance charges in Section 260-3 and Section 690.
